Proposed Solution

Date	30 October 2022
Team ID	**PNT2022TMID10456**
Project Name	Project - University Admit Eligibility Predictor
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No:	Parameter	Description
1.	Problem Statement (Problem to be solved)	Students frequently have a number of inquiries when making educational plans regarding the programmes, colleges, employment prospects, costs involved, etc. One of their biggest concerns is getting into the university of their dreams. Students frequently choose to further their study at institutions with a solid international reputation. Concerns about getting into college are common among students.
2.	Idea / Solution description	The main goal of this research is to create a mechanism to address the issues students encounter when applying to institutions. We are creating a system called the University Admit Eligibility Predictor (UAEP) that will enable students to estimate, based on their profiles, the likelihood that a certain university would select their application. The system will also suggest universities for the student to apply to that have a good chance of admitting him or her.
3.	Novelty / Uniqueness	We'll be developing a straightforward user interface that will enable users to enter information about a student's profile and receive the application's forecasted result as an output. This project's goal is to assist students in narrowing down institutions based on their profiles. The anticipated results offer them a good indication of their prospects of admission to a particular university.

4.	Social Impact / Customer Satisfaction	Students will eventually benefit from this research by not having to spend as much time and money at education consulting firms. Additionally, by suggesting institutions where they have the best chance of being admitted, it will help them reduce the number of applications they submit, saving them money on application fees.
5.	Business Model (Revenue Model)	This programme allows for the placement of advertisements for various universities, which allows us to make money.
6.	Scalability of the Solution	Future plans include the addition of one faculty person from each institution, who will assist students in getting information about the school, the courses, and other topics. In this software, a chat feature is also an option.
